You determine the bandwidth based on what data rate you want to transmit. So lets say you want to transmit R_s samples per second, then bandwidth is equal to $R_s \times (1 + \text{rolloffFactor})$.

An antenna is a device to transmit and/or receive electromagnetic waves. Electromagnetic waves are often referred to as radio waves. Most antennas are resonant devices, which operate efficiently over a relatively narrow frequency band.

Here b is an optional argument. When $b = \text{True}$ (default) then the columns denote the groups/treatments, while when $b = \text{False}$, the rows denote the groups/treatments. This argument is not relevant for SST_{Tot} , df_{Tot} and MST_{Tot} (since the result is the same in either case). These functions ignore any empty or non-numeric cells.

1. Basic concepts1.1.. Categories of nanostructured materialsOne of the very basic results of the physics and chemistry of solids is the insight that most properties of solids depend on the microstructure, i.e. the chemical composition, the arrangement of the atoms (the atomic structure) and the size of a solid in one, two or three dimensions.

Introduction. Redundancy is a common approach to improve the reliability and availability of a system.

Adding redundancy increases the cost and complexity of a system design and with the high reliability of modern electrical and mechanical components, many applications do not need redundancy in order to be successful.

2.. Artificial neural networksAn artificial neural network , is a biologically inspired computational model formed from hundreds of single units, artificial neurons, connected with coefficients (weights) which constitute the neural structure. They are also known as processing elements (PE) as they process information. Each PE has weighted inputs, transfer function and one output.

Applied physics is intended for a particular technological or practical use.It is usually considered as a bridge or connection between physics and engineering. "Applied" is distinguished from "pure" by a subtle combination of factors, such as the motivation and attitude of researchers and the nature of the relationship to the technology or science that may be affected by the work.
