

### **biosynthesis of secondary metabolites pdf**

Finding new secondary metabolites is a prerequisite for the development of novel pharmaceuticals, and this is an especially urgent task in the case of antibiotics due to the rapid spreading of bacterial resistances and the emergence of multiresistant pathogenic strains, which poses severe clinical problems in the treatment of infectious diseases.

### **Biosynthesis and function of secondary metabolites**

The building blocks for secondary metabolites are derived from primary metabolism. The number of building blocks needed is surprisingly few. The most important building blocks employed in the biosynthesis of secondary metabolites are derived from: 1. Acetyl coenzyme A (acetyl-CoA) 2. Shikimic acid 3. Mevalonic acid 4. 1-deoxyxylulose-5-phosphate 5.
