Representational State Transfer (REST) is a software architectural style that defines a set of constraints to be used for creating web services. Web services that conform to the REST architectural style, termed RESTful web services, provide interoperability between computer systems on the Internet. RESTful web services allow the requesting systems to access and manipulate textual representations ...

REST is an architecture style for designing networked applications. REST is a lightweight alternative to mechanisms like RPC (Remote Procedure Calls) and Web Services (SOAP) etc.

What is REST – Learn to create timeless RESTful APIs.

A Web API is a development in web services where emphasis has been moving to simpler representational state transfer (REST) based communications. Restful APIs do not require XML-based web service protocols (SOAP and WSDL) to support their interfaces. W3C Web Services (Specific) In relation to W3C Web Services, the W3C defined a web service as: . A web service is a software system designed to ...

UPDATE (2011-04-15): Since I wrote this post I've learned a tremendous amount about WordPress plugin development; so much so that I can't overstate how much more I know today than when I wrote this post years ago. So, while the following post might be a novelty to read, I highly recommend that you don't use this approach. The only way that a RESTful approach to web services in WordPress ...

RESTful Web Services in a WordPress Plugin

Developers of Web implementations had already exceeded the early design. In addition to static documents,

requests could identify services that dynamically generated responses, such as image-maps [Kevin Hughes] and server-side scripts [Rob McCool].

Spring is one of the most widely used Java EE framework. We have earlier seen how to use Spring MVC to create Java based web applications. Today we will learn to create Spring Restful Web Services using Spring MVC and then test it out with the Rest client. At the end, we will also look into how to invoke Spring Restful web service using Spring RestTemplate API.

A web service typically offers a WSDL from which you can create client stubs automatically. Web Services are based on the SOAP protocol. ASP.NET Web API is a newer Microsoft framework which helps you to build REST based interfaces. The response can be either JSON or XML, but there is no way to generate clients automatically because Web API does not offer a service description like the WSDL from ...
