

riveted drawn series 1 pdf

A rivet is a permanent mechanical fastener. Before being installed, a rivet consists of a smooth cylindrical shaft with a head on one end. The end opposite to the head is called the tail. On installation, the rivet is placed in a punched or drilled hole, and the tail is upset, or bucked (i.e., deformed), so that it expands to about 1.5 times the original shaft diameter, holding the rivet in place.

The lorica hamata is a type of mail armour used by soldiers for over 600 years (3rd century BC to 4th century AD) from the Roman Republic to the Roman Empire. Lorica hamata comes from the Latin hamatus (hooked) from hamus which means "hook", as each ring hooks into one another.. It was issued to both primary legionary and secondary auxilia troops and was mostly manufactured out of bronze or iron.
